 Bogor, Indonesia

## Work Experiences

### Fullstack Developer • SMK WIKRAMA BOGOR

Public Complaint Management System

- Developed a public complaint web application using Laravel, Tailwind CSS, and MySQL.
- Built a responsive and user-friendly interface for submitting and managing complaints.
- Managed the MySQL database to store and process complaint data in a structured manner.
- Implemented core features such as complaint submission, tracking, and management effectively.

### Web Developer • Garap Digital Nusantara

E-Waris

As a Web Developer, I developed the E-Warris web application using Laravel. I was responsible for building and managing structured submission and data management features, implementing application logic, and integrating the database to support administrative processes. I also ensured the application remained stable, secure, and user-friendly.

Film Islami Kemenag – <https://filmislami.kemenag.go.id>

As a Frontend Developer, I developed and maintained the user interface of an Islamic educational video streaming platform using Laravel, Inertia.js, and React. I built responsive and accessible layouts to ensure optimal performance across multiple devices, implemented interactive components to enhance user experience, and collaborated with the team to refine features and improve overall platform usability.

PDAM Tirta Agara

As a Backend Developer, I developed and maintained backend systems using Laravel. My responsibilities included managing application logic, business processes, and database structures, as well as implementing backend features to ensure system stability, security, and efficiency. I worked closely with the frontend team and stakeholders to align the system with operational requirements.

### Intern Web Developer • PT Jann Azzam Mandiri

As a QA Engineer for the SODIK Application, I was responsible for conducting functional testing to ensure all application features worked according to requirements. I identified and reported bugs, validated implemented fixes, and maintained application quality to ensure readiness for end users.

As a Fullstack Developer at TCIDGrab

<https://tcidgrab.liat.co.id/>, I developed web applications using Laravel and Tailwind CSS. I handled both backend and frontend development, managed application logic and database structures, and ensured the user interface was responsive,

secure, and optimized for performance.

In the Web IDP project, I worked as a Frontend Developer using React.js. I built interactive, modular, and maintainable UI components, implemented responsive designs to ensure optimal usability across devices, and collaborated with the team to refine features and enhance overall user experience.
